Basic Refrigeration and Maintenance plus F- Gas Certification In company training

The WATA route to success

This course provides an understanding of the fundamental principles and maintenance of refrigeration systems. It is an intensive course leading directly to the assessments required to gain the F Gas certification awarded by the CITB Construction Skills and recognised by ACRIB (Air Conditioning and Refrigeration Industry Board). The certificate will last for five years.

EU legislation states that people handling refrigerant gases that do damage to the environment must hold a recognised certificate of competence

Please bring two passport photos and your NI number to the course

The syllabus includes:

- Pipework jointing skills and brazing
- Pressure Enthalpy charts
- Replacement of a key system component
- Pressure strength and tightness testing
- Leak testing of systems
- Dehydration methods
- Charging and recovery of a system charge
- Montreal and Kyoto protocols

Who is the course suitable for?

Skilled people with an engineering background who wish to become refrigeration engineers.

Course Dates

In company courses only
